

Quick Tips

Customize Online Banking

Hide Accounts

Hide accounts that you don't need to see each time you login. For example, you may want to hide a youth account that you are signed on with a child.

You can switch your accounts from Visible to Hidden at any time in Account Preferences

Hidden accounts automatically drop to the bottom of your Account Preferences page and can be changed back to Visible at any time

NOTE: Both Hidden and Visible accounts display in your transfer drop-down list of accounts.

Helpful Tip: Digital Money Manager automatically imports the balances and spending history from visible accounts. For this reason, we suggest you hide accounts not directly tied to your household budget and debt pay-down plans to ensure accuracy and confidence in tracking and reporting.

Switch your accounts from visible to hidden at any time in Account Preferences. Hidden accounts will still display in your transfer drop down list of accounts.
